

# Lesson summary

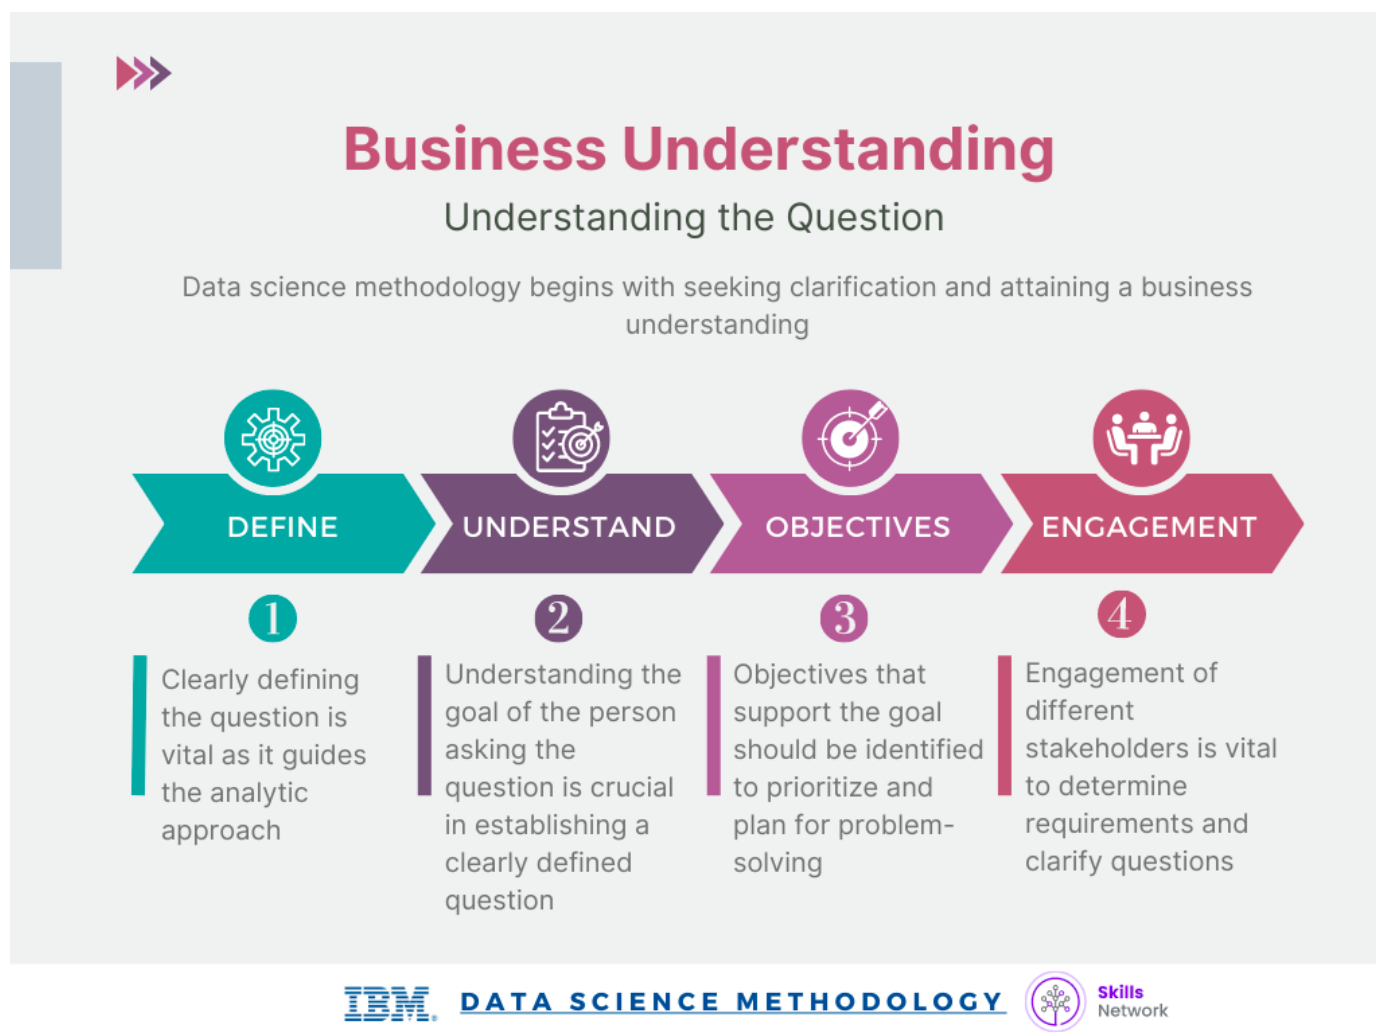

## Module 1 Lesson 1: From Problem to Approach

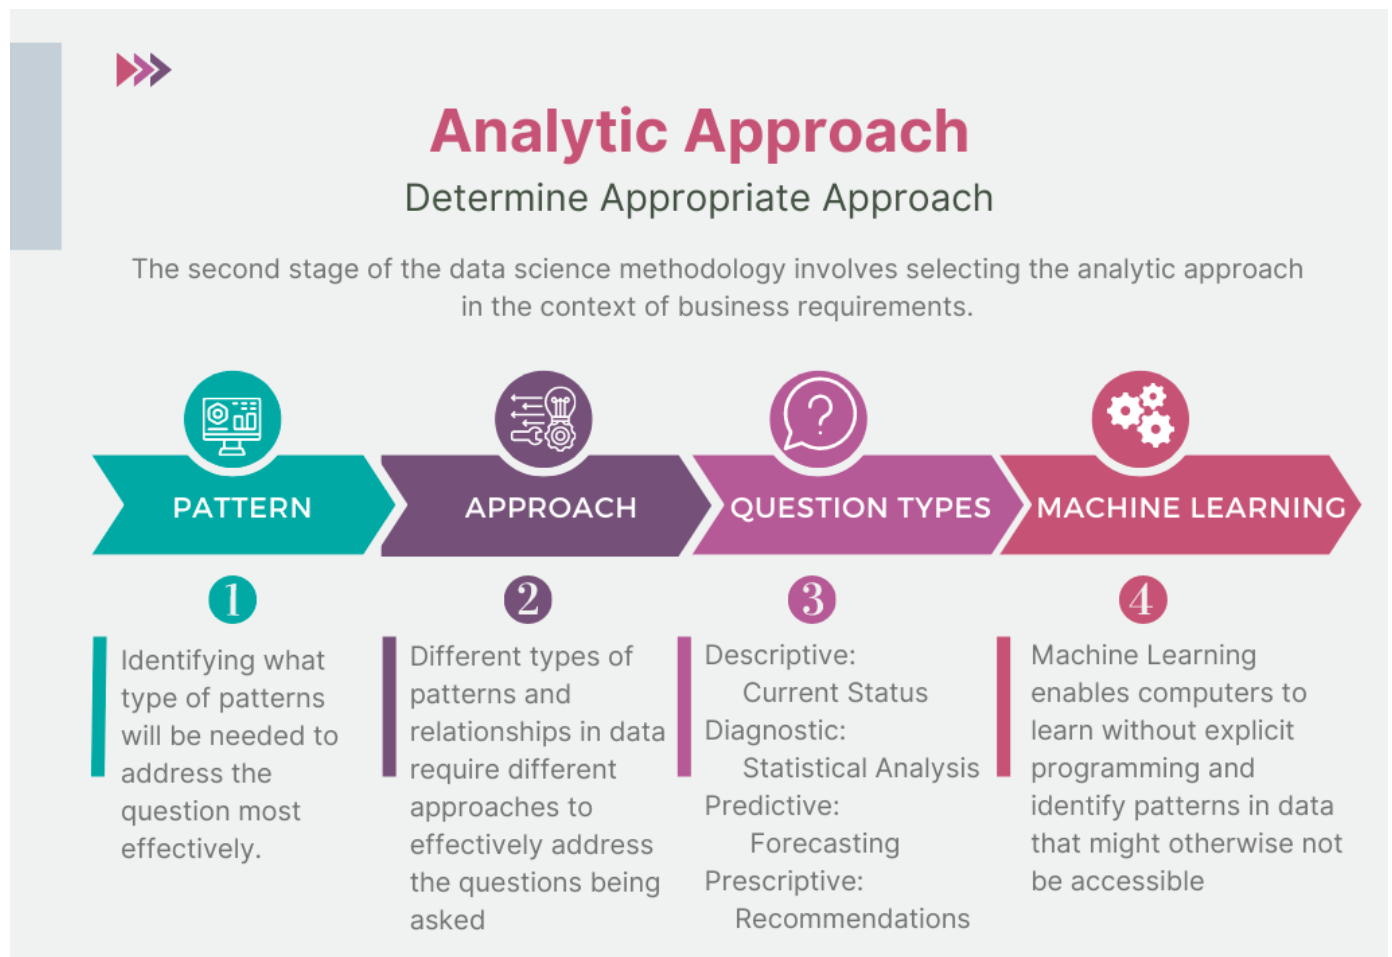

**Skills**  
Network

**Congratulations! You have completed this lesson. At this point in the course, you know:**

- Foundational methodology, a cyclical, iterative data science methodology developed by John Rollins, consists of 10 stages, starting with Business Understanding and ending with Feedback.
- CRISP-DM, an open source data methodology, combines several of the data-related methodology stages into one stage and omits the Feedback stage resulting in a six-stage data methodology.
- The primary goal of the Business Understanding stage is to understand the business problem and determine the data needed to answer the core business question.

- During the Analytic Approach stage, you can choose from descriptive, diagnostic, predictive, and prescriptive analytic approaches, whether to use machine learning with clustering associations.

**IBM DATA SCIENCE METHODOLOGY**

- Decision tree classification is a predictive analytics approach that's easy for non-data scientists to implement
